A PET BUSINESS

Henry Bennett has two great loves: pets and business. For years he has been combining them, making pet-sitting his career. Recently Bennett posted a detailed manual on the Internet to help highly motivated pet-sitters like himself get started.

The traditional view of pet-sitting is that it requires little more than a rapport with animals and maybe a good pair of legs. "Not so", says Bennett, 31, who's been doing it since he was 12. "It can be a real profession. But some business know-how is crucial". A typical piece of advice on his website thus reads, "Prepare handouts for veterinary clinics and pet shops. Place advertisements in local newspapers. Leave business cards at travel agencies for pet owners going on vacation".

Bennett is not alone in this serious approach. The National Pet-sitters League (NPL), for example, has a website where pet owners and pet-sitters can find each other, and a lot more besides. Here you can learn, for instance, what services other pet-sitters are offering and how much they're charging. Or you can take a quiz to determine which "clients" would suit you best (cats? dogs? parrots?), and get practical advice on subjects such as securing your yard or cleaning carpets.

Bennett isn't overly impressed with the NPL website. "It's fine for a kid who's after pocket-money", he says, "but my site is where you go if you want to grow". Many people seem to agree. Since it was posted four months ago, his online manual has been viewed some 300,000 times. "This business has been very good to me", says Bennett.

"So I can afford to share my expertise free of charge".

Despite his emphasis on the financial aspects of pet-sitting, Bennett insists that it offers much more than a steady income. "It's one of the few family-friendly businesses left", he says. "So if you're an animal lover and would like a flexible work schedule, this may be just the career you're looking for."

ANIMALS AT YOUR SERVICE

Many pet owners claim that their pets not only make them happier, but also keep them healthier. Now researchers have found evidence that contact with an animal can indeed reduce stress, improve mood, and even help people recover from illness more quickly. Following these findings, animals are now being used to help hospital patients.

A growing number of organizations are arranging for people to bring their pets to hospitals, so that patients can stroke them or play with them. A leading organization in this field is the Delta Society, with over 10,000 volunteers in its Pet Partner Program. While the most popular animals are dogs, there are also rabbits, cats and parrots. The pets chosen for the program must have the right personality, including the ability to adjust quickly to new environments. They are trained to remain calm in the difficult situations they will encounter in hospitals, such as moving through crowded corridors or being held by strangers.

A more professional use of animals in hospital care is "Animal Assisted Therapy" (AAT). Several universities nowadays offer a degree in this field. The graduates are qualified therapists who work together with highly-trained animals as part of the medical team. In this type of therapy, the animal plays a specific role in the treatment, such as providing a distraction during an unpleasant medical procedure. Much of the work focuses on children. For example, a therapist may be able to win a nervous child's cooperation by saying, "The dog wants you to lie very still". And if a child is too shy to talk to a doctor, the therapist may get him to communicate by bringing in a rabbit and saying, "Tell Bunny how you're feeling today".

As for the animals themselves, every effort is made to ensure their well-being. In fact, those that show any sign of stress are never brought to the hospital again. Such cases, however, are rare. As both volunteers and professional therapists report, most animals seem to enjoy the activity just as much as their "clients" do.

DON'T CALL, JUST WHISTLE

Like most kids on the tiny island of Gomera, 11-year-old Maria Garcia has her own cell phone. But another form of communication - one that doesn't require batteries - is just as common among the children of the mountainous island. It is known as El Silbo, the Gomera whistle. El Silbo is actually a simple kind of language. By shaping a finger like the letter U and putting it in one side of the mouth, the islanders are able to produce a set of six whistle sounds. Using those sounds to form words and sentences, they can communicate with people as far as 2.5 km away.

Until the end of the 1950s there were few roads in Gomera, and even fewer telephones. "As kids we learned El Silbo in the streets", says 58-year-old Pedro Darias. "If you didn't want to do a lot of climbing up and down to find people, you had to use it". But in the 1960s, as roads were built and phones became common household items, the need for El Silbo rapidly declined.

In 1982, the local government decided to rescue the tradition by teaching El Silbo in the schools. Within three years, most children on the island were using the language. "It takes a lot of practice", explains Darias, who is one of the teachers. "When you've only got six sounds, a lot of words seem almost the same. So you really need the context of the whole message to tell you what you're hearing".

Once the children of Gomera master their unique language, they delight in using it as a secret code, baffling tourists with the rapid whistles. More importantly, in some situations El Silbo has the additional advantage of being the most convenient mode of communication. "Suppose I'm at a friend's house", says Maria Garcia, "and I want my grandfather to pick me up on his way home from work in the fields. I can just stand in the doorway and whistle my message to him". Now that's something you can't do anywhere else in the world.

THRILLS ON WHEELS

Ask American kids to name their favorite sports, and you're likely to find skateboarding somewhere near the top of the list. Many of them are even experts on the subject, eager to discuss different techniques and the physical challenges of various stunts. But there is something that even they would be surprised to learn: the sport is not as new as most kids believe.

The fact is that skateboarding goes back as far as the 1950s, when surfing the waves was a favorite pastime of California youngsters. One day, when the weather didn't allow surfboarders to hit the waves, someone came up with the brilliant idea of "surfing the streets" instead. Suddenly, skateboarding was born. The first skateboards, as they were immediately dubbed, were no more than wooden boards with roller skates strapped underneath. Nevertheless, California neighborhoods were soon filled with kids rattling down the streets, and by 1975 skateboarding had spread nationwide and developed enough for the first competition to be held.

Since then the sport has developed rapidly. New technology has produced boards that are lighter and more flexible, along with effective safety equipment, such as helmets and knee-pads. These advances have enabled skateboarders to invent ever more impressive acrobatic moves. Their astonishing jumps and somersaults have made skateboarding competitions increasingly popular and exciting events.

Most people think that skateboarding is a sport for boys only, but a quick internet search will bring up lots of information aimed specifically at girls. "Girls can have as much fun on a board as guys," says Elissa Steamer, a skateboarding champion, "and they can be just as technically skilled". Today there are special all-girl competitions, as well as professional organizations for both men and women.

What started as a mere pastime for young people is now recognized sport, with athletes earning tens of thousands of dollars in prize money at international competitions. Skateboarders love the thrill of performing daring stunts. As for everyone else, just watching the experts is thrilling enough.

WIND ENERGY

The fastest growing source of energy in the world today isn't oil, coal, or some hi-tech invention. Instead, it's the wind – the same force that has served people for thousands of years. Wind seems to be the perfect solution to our energy problems: it's non-polluting, it's all around us, and there's no way we can use it all up.

In the last few years, more and more countries have become interested in using wind to produce energy. One such country is Britain, which is developing a huge "wind farm" near its west coast. When completed, the giant wind turbines are expected to produce enough electricity for five million homes.

Wind power is not likely to replace traditional fuels in the near future. However, it could provide much of a country's energy needs, and at much lower cost. According to the US Energy Department, the wind farms now being constructed in the USA will eventually supply almost half the country's electricity.

Unfortunately, the huge turbines are not exactly beautiful, they are also noisy and often break down. Moreover, birds tend to collide with them. This has happened so frequently that even some environmental groups that used to demand the development of wind energy now oppose it. But the biggest drawback is the simple fact that the wind doesn't blow whenever and wherever you want it. You just can't count on it always being there when you need it most – like on hot summer days, when electricity consumption is especially high.

All these problems will have to be solved before we can expect the wind to become our main source of energy. But apparently the people of Holland, who are famous for their windmills, are right: the wind can be an excellent source of energy if you know how to use its potential.
